

Users opinions

We have been using system ASK since 2009 in our firebrigade. The system enables fast and effective alarming of our firefighters via mobile and fixed phones, what shortens the response time of our operatives. Head commander of the intervention immediately and automatically gets statistics on which members will come to the intervention, which helps in organizing of firefighters in unexpected situations. It is also suitable for convening exercises, working actions and other meetings. We are very satisfied with the operation of the system ASK and we will continue to apply it in our everyday firefighting situations.

Ivan Jezernik, the commander of firefighter association DOBRNA-VOJNIK

ASK system has become an indispensable tool in informing all of our firefighters. Everyday we help in saving our local residents and their property, so we have to be quick. When it is necessary to convene a large group of operatives, one simple telephone call enables that all members are informed of the specific event at once. Since the system ASK offers a reliable communication, as the commander of the operational units one can completely dedicate to his tasks in the case of intervention. Ever since we are using the ASK system, all the problems regarding communication between our members disappeared. As a longtime firefighter, I am very delighted with its performance.

Štefan Pohajač, then subcommander of firefighter association DOBRNA-VOJNIK

With the use of the ASK system I am able to send alarm to my firefighters-operatives anytime and anywhere they need to come to the intervention. Regarding the fact that every firefighter has his mobile phone with him all of the time, their availability using the ASK system has increased. In our work it is important to respond very rapid and the first phase is also quick notification of all operatives. Due to the ASK system we have undoubtedly gain in fast responding. In this manner we have also reduced the time to make export with our fire trucks. I also like the fact that we do not need to worry about the operating of the system by ourselves and this also fulfills all of my expectations.

Marko Novak, operative firefighter of voluntary fire brigade ZAGORJE OB SAVI
